EDMONTON POLICE SERVICE • DEMU AUDIO WALK QUIZ CONTEXT

WORD/DATA PROCESSING CLERK III – CRIMINAL BODY WORN VIDEO SECTION TECHNICIAN (#56123)

Kyle Jensen • Thursday, October 15, 2026 @ 11:00 AM MDT (Nexus Business Park, Unit #134)

Comprehensive context document for Gemini Mobile Voice Quiz on a 45-minute audio walking session.

1. INSTRUCTIONS FOR GEMINI VOICE QUIZMASTER (COPY-PASTE PROMPT)

INSTRUCTION TO GEMINI:
"You are Kyle Jensen's interactive audio quizmaster and Edmonton Police Service (EPS) Digital Evidence Management Unit (DEMU) Field Supervisor. Kyle is taking a 45-minute walk with his dog, listening to you through his earbuds via voice chat.

Your Rules:

- **Ask ONE question at a time.** Never ask multiple questions or give walls of text. Keep it conversational.
- **Scenario-Based:** Frame questions like realistic situations Kyle will encounter as a Body Worn Video Section Technician tomorrow.
- **Wait for Kyle's spoken answer.** Listen to his response.
- **Evaluate & Teach:** If he is correct, give brief enthusiastic praise and a 1-sentence legal/technical rationale. If he misses or hesitates, explain the exact answer, cite the law (FOIP, YCJA, Evidence Act, Case Law) or codec principle, and then immediately ask the next question.
- **Mix the 5 Domains:** Cycle smoothly across (1) Axon BWV Hardware & Ingestion, (2) Redaction & Privacy Statutes, (3) Video/Audio Codecs & Tools (AVS/WavePad), (4) CAD/RMS Discrepancy Spotting, and (5) Oral STAR Interview & Resume Defense.
- Start immediately by greeting Kyle and asking your first scenario question!"

2. POSITION VITAL STATS & STRATEGIC OVERVIEW

Requisition	Job #56123 • Word/Data Processing Clerk III • CSU 52 Union
Department	Digital Evidence Management Unit (DEMU) • Information Technology & Records Division
Compensation	$28.64 – $35.92 / hr ($59,814.94 – $75,005.14 annual) + LAPP pension & benefits
Schedule	40 hrs/wk, 4-Day Compressed Schedule (Mon–Thu or Tue–Fri, 06:00–16:00)
Location	Nexus Business Park, #110/#134, 14315 118 Avenue NW, Edmonton, AB (Strictly on-site)
Candidate Profile	Kyle Jensen • NAIT DMIT Diploma (Video Production Major, Dean's Honor Roll) • 6+ yrs TELUS Lead Rover (12,000 incident-free hours) • Ideal Integrations IP surveillance • Clean Class 5

3. HIGH-YIELD EXAM QUESTIONS & TECHNICAL RATIONALES

Domain 1: Axon BWV Hardware, Buffering & Ingestion

HARDWARE **Pre-Event Buffer Audio Configuration**

Scenario: Defense alleges officer tampered with video because first 30 seconds has clean video but zero audio.

Correct Answer: Standard departmental configuration. Axon Body 3/4 operates in a rolling 30-second video cache in volatile memory. Audio recording is disabled in pre-event buffer to protect privacy during standby; audio activates only upon double-pressing the event button.

INGESTION **Dock Upload SHA-256 Hash Mismatch**

Scenario: During automated docking station ingestion, MD5/SHA-256 cryptographic hash calculated on cloud ingest does not match the camera's local checksum.

Correct Answer: Quarantine the media immediately; do not release for court disclosure. Re-dock the hardware camera to re-verify parity, check transfer logs, and alert FVAD/Systems Admin if packet corruption occurred.

RETENTION **Accidental Non-Evidentiary Recordings**

Scenario: Officer accidentally left camera recording during a washroom break or personal meal.

Correct Answer: Apply "Non-Evidentiary / Accidental" retention tag under EPS SOP, restricting viewing permissions. Technicians NEVER delete evidence files; they require sworn Inspector/Superintendent authorization for expungement.

Domain 2: Redaction, Privacy & Statutory Law

ABSOLUTE SHIELD **Informer Privilege & Undercover Officers**

Precedent: *R. v. Leipert [1997]*. Informer privilege is an ancient, absolute common-law rule with zero judicial discretion. If a confidential informant or undercover officer appears in video/audio, their identity must be 100% redacted (solid black box + voice pitch shift). Even the trial judge cannot order disclosure.

STATUTORY BAN **Youth Criminal Justice Act (YCJA s. 110)**

Rule: Absolute publication and disclosure ban on identifying any person under 18 involved in criminal proceedings—whether they are an accused, a victim, or a bystander witness. Redact face, clothing, school emblems, name, and voice. **Critical Note:** The ban remains permanent even after the youth turns 18.

PRIVACY **FOIP Section 17 & 18 (Personal Privacy & Safety)**

Rule: Redact uninvolved bystanders in public spaces, medical records/injuries visible on EMS stretchers, domestic violence safe houses, and personal contact info. Mandatory exception under s. 18: Refuse disclosure if it could threaten an individual's mental or physical safety.

TACTICAL **FOIP Section 20 (Law Enforcement & Breaching Tactics)**

Rule: Shield cruiser Mobile Data Terminal (MDT) screens, officer personal cell numbers, internal tactical channels, SWAT breaching techniques, firearms staging, and covert camera vantage points. Disclosing these harms law enforcement effectiveness.

DISCLOSURE **Crown Disclosure & R. v. Stinchcombe [1991]**

Rule: The Crown has a constitutional duty under s. 7 Charter to disclose all relevant evidence to the defense, whether inculpatory or exculpatory. Technicians must never redact accused conduct, officer use of force, or prime evidence.

4. VIDEO/AUDIO CODECS & SOFTWARE TOOLKIT BRIDGE

Video & Audio Compression Principles

VIDEO **GOP Architecture: I-Frames vs P/B-Frames**

Concept: I-Frames (Intra-coded) are complete standalone images (spatial compression only). **P-Frames (Predicted)** and **B-Frames (Bi-directional)** store only differences between frames (temporal compression). In CCTV and redaction, always cut/split on I-frames to prevent macroblocking and sync drift.

VIDEO **Remuxing vs Transcoding**

Concept: Remuxing (Re-wrapping) changes the container (e.g. MKV → MP4) without re-encoding the video bitstream. Zero quality loss, 100% bit-exact, takes seconds. **Transcoding** decodes and re-encodes pixels, causing minor generational loss. In court evidence, remux whenever possible; transcode only when the codec itself is unplayable.

AUDIO **Censorship Tone: 1,000 Hz Sine Wave**

Concept: Standard court censorship tone is a **1 kHz (1,000 Hz) sine wave** at −12 dB to −18 dBFS. It clearly signals intentional redaction to the judge and jury rather than dead microphone silence or equipment failure.

Software Bridge: Adobe Creative Cloud ↔ Police Evidence Utilities

Adobe CC Tool (Kyle's NAIT Background)	Police Evidence Tool	Why Law Enforcement Uses It & Operational Function
Adobe Media Encoder	**AVS Video Converter**	Lightweight batch transcoder. Ingests broken or proprietary security camera files (Dahua `.dav`, Samsung `.sec`, Hikvision) that crash Adobe, converting them into standard MP4/H.264 court files. *Always keep Frame Rate on "Original" to avoid duplicate frames.*
Adobe Audition (Waveform)	**WavePad Sound Editor**	Destructive single-track waveform editor. Opens 911 calls and BWV audio tracks instantly. Used to highlight speech, hit `Ctrl+L` to silence, insert 1 kHz tone bleeps, or apply pitch shifting (without tempo change) to protect informant voices.
Adobe Premiere Pro	**Axon Redaction Studio**	Non-linear editor. Uses dynamic motion tracking, keyframes, Gaussian blur, and mosaic pixelation boxes to track moving faces and MDT screens across dynamic body cam footage.
Photoshop / Illustrator	**Forensic Still Grab / Omnivore**	Preserves 1:1 pixel dimensions and uncompressed bitmap formats (BMP/TIFF) when extracting freeze frames for suspect identification and court exhibits.

5. CAD DISPATCH VS EPROS RMS DISCREPANCY SPOTTING

DISCREPANCY **1-Hour Time Drift (UTC vs MDT)**

Rule: Body cameras often store internal hardware timestamps in **UTC (Zulu)**. If a technician does not account for MDT (UTC−6) or MST (UTC−7) daylight saving offset, the video will appear 1 hour ahead of CAD dispatch logs. Always check the timezone offset tag.

DISCREPANCY **Occurrence Number & Badge Tagging**

Format: EPS Occurrence format is standard `OCC-YYYY-NNNNNN` (e.g. `OCC-2026-094122`). Officer badges follow `Cst. [Initial]. [Last Name] #[Badge Number]`. Watch for transposed digits or incorrect assigned unit tags.

DISCREPANCY **Call Type vs Retention Classification**

Rule: Mismatched categorization causes premature evidence deletion! If CAD logs an ASSAULT IN PROGRESS (Criminal Indictable → 10 Year Retention), but ingestion tags it as TRAFFIC STOP (Summary Offence → 2 Year Retention), evidence would be illegally destroyed before trial.

6. ORAL STAR INTERVIEW & RESUME DEFENSE (TOP 5 QUESTIONS)

STAR 1 **Why transition from TELUS/Ideal telecom field tech to DEMU evidence clerk?**

Talking Point: My foundational degree is NAIT Digital Media & IT (Video Production Major, Dean's Honor Roll). At TELUS, I combined that technical aptitude with 6+ years of strict operational compliance, managing repeat trouble queues, auditing dispatch records, and maintaining 12,000 incident-free hours under strict privacy standards. DEMU is where my two core strengths unite: video editing/codecs expertise and unyielding procedural discipline.

STAR 2 **Graduated NAIT in 2015. How are your video editing skills up to date?**

Talking Point: I have maintained active editing projects continuously since 2013 using Premiere Pro and After Effects for corporate and non-profit clients (Earth Group, St. Stephen's College). Furthermore, my work at Ideal Integrations directly involved configuring IP surveillance cameras, NVR streams, bitrates, and resolution exports. My technical media literacy is active and continuous.

STAR 3 **How do you handle disturbing, graphic, or traumatic police footage?**

Talking Point: I view footage through the lens of a professional forensic technician: my mission is to uphold justice, protect legal rights, and ensure court integrity. Having worked in critical dispatch environments, I maintain healthy emotional boundaries, practice active mental resilience, and utilize EPS peer support and psychological wellness resources.

STAR 4 **Walk through your step-by-step redaction workflow.**

Talking Point: (1) Preserve pristine master exhibit and verify SHA-256 hash. (2) Work on a duplicate in DEMS. (3) Audit occurrence file for protected parties (FOIP s. 17 bystanders, YCJA s. 110 youth). (4) Apply dynamic keyframe motion tracking blur masks. (5) In WavePad/Premiere, insert 1 kHz tone bleeps over phone numbers and names. (6) Maintain detailed technical memo of all filters, tools, and timestamps for court disclosure.
